

Liza Velychko

Junior QA Engineer · Mobile & Web · Ukraine

Portfolio kixipka.github.io/QA-Portfolio

GitHub github.com/kixipka · Email kixipka@gmail.com · Telegram t.me/xlizabeth

Junior QA engineer focused on web and mobile. Hands-on experience testing a real iOS product through TestFlight and Xcode Simulator, checking the same rules in Swagger UI, and running a full web test cycle with defects logged in Jira.

SELECTED WORK

LangSide: Learn English — iOS / TestFlight

Version 1.1, build 1 · App Store product · Role: manual QA

- Physical device: iPhone 17, iOS 26.5. Simulator: iPhone 14 Pro Max, iPhone 16 Pro, iPhone 17 Pro.
- Scope: authentication, onboarding, learning flows, validation, install/update, and API spot checks on the endpoints behind those flows.
- BUG-IOS-001 — Password validation rules differ between the iOS client and backend. UI requires 8 characters; POST /api/v1/auth/register accepted a 4-character password (Ab12).
- BUG-IOS-002 — During a 1.5s onboarding transition, a second single-choice answer can still be selected. Rapid interaction leaves the state ambiguous.

Our Story — Web application testing

Small client-side HTML/CSS/JS product · Jira (SCRUM) · Chrome 151, macOS

- Home and History in depth; smoke testing across Reasons, Dates, and Letter.
- SCRUM-11 — Heart counter increases by 3 instead of 2 on a rapid double click. Functional / interaction. Reproducibility 5/5.
- SCRUM-14 — History record can be saved with an empty required Date field. Validation / functional.
- SCRUM-15 — History accepts future dates. Logged in Jira; treated as a product clarification until a past-only rule is confirmed.

SKILLS

Testing	Functional, regression, smoke, exploratory, UI, negative, boundary
Mobile	iOS, TestFlight, Xcode Simulator, device testing
API	Postman, Swagger UI, HTTP basics, JSON
Tools	Jira, TestRail, Git, GitHub, Chrome DevTools
Docs	Test cases, checklists, bug reports, test summary

QA TRAINING

Manual testing fundamentals, API testing with Postman and Swagger UI, test documentation, Git, and common QA workflows — then applied on a live web project and a TestFlight iOS build.

LANGUAGES

Ukrainian — native Russian — fluent English — used in QA documentation (cases, bug reports)
